ICT08-044 - Distributed Information Processing for Spatio-Temporal Fields in Wireless Sensor Networks

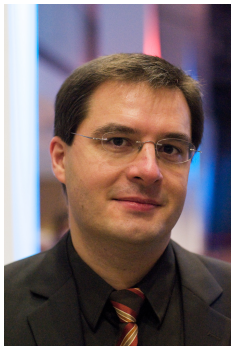

Zusammenfassung

This project develops methods for the aggregation, processing and transmission of data in wireless sensor networks which operate in a self-organized and decentralized manner and are less susceptible to faults. Such sensor networks are suitable for monitoring structures and supply lines, environmental monitoring and geophysical monitoring. The project is a joint effort of groups from the Vienna University of Technology, Darmstadt University of Technology and University of California in San Diego, combining outstanding expertise in signal processing and communications.

Schlagworte:
wireless sensor networks, distributed information processing, physics-basedsignal processing, cooperative communications

---

Principal Investigator:	Gerald Matz
Institution:	Vienna University of Technology
Weitere Projektpartner:innen:	Christoph Mecklenbräuker (Vienna University of Technology) Alex Gershman (Darmstadt University of Technology) Peter Gerstoft (University of California, San Diego)

Status: Abgeschlossen (01.03.2009 – 28.02.2013)
