

## ICT08-044 - Distributed Information Processing for Spatio-Temporal Fields in Wireless Sensor Networks

### Zusammenfassung

This project develops methods for the aggregation, processing and transmission of data in wireless sensor networks which operate in a self-organized and decentralized manner and are less susceptible to faults. Such sensor networks are suitable for monitoring structures and supply lines, environmental monitoring and geophysical monitoring. The project is a joint effort of groups from the Vienna University of Technology, Darmstadt University of Technology and University of California in San Diego, combining outstanding expertise in signal processing and communications.

### Keywords:

wireless sensor networks, distributed information processing, physics-based signal processing, cooperative communications
